

## PE FOAM WITH A HIGH PROPORTION OF RECYCLED CONTENT

### Reliable protection of products

**PE foam with Post-industrial recycled content of 30-80 %.**

Non-crosslinked PE foam with a closed cell structure is a universal packaging material made of foamed polyethylene with excellent usage properties. This material is 100% recyclable.

- | product protection
- | low water absorption rate
- | low weight
- | comparable mechanical properties to standard PE foam of similar density and thickness
- | environmentally friendly – reuse of raw materials
- | made from 30-80% Post-industrial recycled material
- | full recyclability

**| TECHNICAL SPECIFICATION**

| Density (kg/m3) | Width [mm] | Length [mm] | Thickness [mm] |
|-----------------|------------|-------------|----------------|
| 21              | 1200       | 2000        | 10-100         |
| 24              | 1200       | 2000        | 10-100         |
| 28              | 1200       | 2000        | 10-100         |
| 35              | 1200       | 2000        | 10-100         |
| 65              | 1200       | 2000        | 10-100         |

**| COLOR RANGE\***

black

**| RECYCLED CONTENT\***

30–80 %, internal, Post-industrial
